

Rain cap (RC) - Flue Cap (FC)

Theory of operation

The Rain Cap is designed for a basic flue protection against rain or snow, although it allows free flow of smoke and fumes. This model feature side screening that keeps birds and animals out of the chimney and also keeps larger sparks from exiting the chimney. This cap features bolt down tops for easier cleaning.

Rain cap: designed for a single wall thin sheet metal flue, insulated metal or clay round flue with wall thickness less than 1".

Rain cap with air-cooling base: designed for a double or triple wall round pipe.

FC (flue cap): designed for a square or rectangular flue. It will fit over a clay flue or if you need better protection for the top crown, it could be made to fit over a brick, stone or wooden box chimney. Check the price sheet for the largest cap we can make.
